Re : Waiver – TWO PLANE BALANCING STATIC & DYNAMIC

Dear Customer,

We have received your order # _____ for _____ of a sheave to be dynamically balanced (two plane balancing) without the bushing. MASKA cannot guarantee accuracy of two plane balancing if the bushing is not installed on the sheave at the time. Our procedure of balancing includes punching marks on the bushing flange and sheave hub so as to indicate how to line them up during final assemblage.

Please sign and return this document to us as quickly as possible so we can proceed with your order. This waiver serves as a disclaimer that Maska will not be held responsible for vibrations that may result from the fact that the bushing to be used is not included in your order # _____.
